Cloud Object Storage

An enterprise cloud object storage solution

Welcome to your new IBM® Cloud Object Storage service! It provides unstructured data storage for cloud applications. To get started - create a bucket, upload objects and set up access policies to allow other users to work with your data.

Access Management

Invite team members to work with your data. Click on Invite Users below and give them right level of access by selecting appropriate role.

Create a bucket

Learn about resiliency, location and storage class while creating a new bucket

Explore →

Resiliency
Select the best resiliency option for your data with the protection and access you require. Choose "Cross Region" to store your data across three regions within a geography for highest availability and resiliency. Choose "Regional" to store your data across multiple data

Location
Select a location where you would like your data to be physically stored.

Class
Select storage class based on how often you expect to read the stored data. Choose "Standard" for active workloads. Ideal for data that is accessed multiple times a month. Choose "Vault" for less-frequently accessed data that is accessed once a month or less. Choose "Cold Vault" for

Buckets

Buckets serve as containers for objects, and can be individually configured in terms of their location, resiliency, billing rates, security, and object lifecycle rules.
